Lamin Touray

Data Analyst | MSc Computer Science with Data Science | SQL, Python, Power BI | Healthcare & Public Sector Experience

Bethesda, Wales, United Kingdom

Summary

Data analyst with an MSc in Computer Science with Data Science (Merit, University of Wolverhampton, 2026) and commercial experience in reporting and dashboard development.My strongest academic work was in databases and SQL (85%), statistics (77%) and research methods (73%). For my dissertation (80%), I built a multi-agent system in Python and evaluated it through a controlled four-condition experiment of 60 runs, manually auditing 106 generated outputs.In practice, I built a Power BI KPI dashboard for a construction company, giving management a single view of business performance, and I worked as an Information Analyst on an agency assignment at Betsi Cadwaladr University Health Board, using SQL, Excel and Power BI.Alongside this, I am Technical Lead at Datafin, a data consultancy I co-founded, and I have run Touray Solutions since 2011, building and supporting websites for small businesses and community organisations. That work has given me plenty of practice in turning non-technical requirements into working solutions.I am looking for a data analyst, business intelligence or reporting analyst role in North Wales, or remotely.Key areas: Data Analysis | SQL | Power BI | Python | R | Statistics | Business Intelligence | Reporting

Experience

Datafin

Technical Lead & Data Scientist (Founding Partner)

March 2025 - Present (1 year 8 months)

Banjul, The Gambia

Founding partner of a data consultancy, leading the technical side of the partnership's data and software work, from scoping through to delivery.
