Special award graduation

3rd place at the “Best Degree Thesis Awards”

1st place at the “Imagine Cup Competition” in Microsoft Venezuela

1st Place at the 16th “ACM Local Marathon” UCV

Karina Pedrique

Senior Software Engineer | Backend & Platform Systems | Cloud · Microservices · Automation.

Chile

Extracto

Senior Software Engineer with 10+ years of experience building, evolving and troubleshooting production systems across backend, cloud, distributed architectures and web platforms.My work currently spans conversational platforms, outbound messaging systems, product-content/indexing pipelines and legacy applications, where I design integrations, solve complex production issues and modernize existing systems.I have experience working across the full lifecycle of software products — from architecture and backend services to frontend integrations, infrastructure, automation and operational reliability.My main stack includes Python, FastAPI, Node.js, React, Vue, Redis, MongoDB, Kubernetes, AWS and Azure, with additional experience in distributed processing, OCR pipelines, WebSockets, CI/CD and generative AI integrations.I’m particularly comfortable working on systems that require understanding existing architecture, identifying root causes across multiple layers and designing pragmatic solutions without disrupting production environments.

Pervasive Mind

5 años 9 meses

Senior Software Engineer

enero de 2023 - Present (3 años 9 meses)

Región Metropolitana de Santiago, Chile

Currently working across multiple platform areas including Omnitok, outbound messaging systems, product indexing workflows and legacy applications.
Design and development of backend services and integrations using Node.js, Python and FastAPI.
Maintenance and evolution of Omnitok conversational platform components and embedded integrations.
Development and troubleshooting of outbound messaging workflows and third-party integrations.

Ownership of product indexing workflows, including data processing, rendering issues and client-side integration problems.
Investigation and resolution of complex production and legacy-system issues across frontend, backend, infrastructure and integrations.
Architecture and modernization of existing services, improving reliability, maintainability and operational processes.
Work with Redis, Kubernetes, MongoDB, CI/CD pipelines, cloud services and distributed processing systems.
Previously worked with the Data Engineering team, where I designed Python/FastAPI processing services, OCR pipelines, distributed workers and automation workflows.

Full Stack Developer
enero de 2021 - septiembre de 2023 (2 años 9 meses)
Cile

Technical Leader (2021- 2023)
Software development.
Estimations.
Social media and new technology integrations.
Solution of complex issues.

LupAI
Co-Founder & Software Architect
diciembre de 2023 - Present (2 años 10 meses)

Family-run entrepreneurial project focused on the Uruguayan market, developed independently outside my regular working hours.

Co-founded and architected Lupai.
Designed the cloud architecture using AWS (ECS/ECR, S3, DynamoDB).
Built backend services with FastAPI and WebSockets for real-time messaging.
Developed an embeddable React widget for integration into external websites.
Integrated Twilio WhatsApp and generative AI services.
Designed product architecture, intelligent routing and automated deployments.
The platform has been deployed to production and used by real customers.

Full Stack Developer
febrero de 2017 - enero de 2021 (4 años)
Santiago Metropolitan, Chile

Software Developer
octubre de 2016 - febrero de 2017 (5 meses)

Freelance

Freelance Developer
febrero de 2016 - julio de 2016 (6 meses)

Desarrollo frontend empleando AngularJS,Node.js, Grunt y Gulp task runner.
Desarrollo de proyectos en Unity Frameworkcon C#, NGUI y AVPro Windows.

Hecticus Software, Inc.

Developer
octubre de 2011 - febrero de 2016 (4 años 5 meses)

Working currently in a Project Development for Android and IOS using Unity3d and NGUI with C# and development different web services with Play Framework.
I have worked in other projects as:
- Android Development in Java.
- Migration of Game UPixel from IOS to Android using the Cocos2dx library and Android SDK.
- REST based Web server creation for image processing and clients data synchronization.
- Job, handlers and multitasking environment programming in Java.
- Development of different internal web portals in PHP with owner platform and Java using Play
framework.
- Research about new tools like RabbitMQ, Play Framework, among others.
- Collaborative design of new modules for programs at the company.
- Development of small modules with AngulatJs and Apache Cordova.

UCV

3 años 3 meses

Teaching assistant at Center for Computer Graphics
junio de 2009 - diciembre de 2011 (2 años 7 meses)
Los Chaguaramos, Caracas Venezuela.

Manage internal lab network, support teachers with different activities, care and support for students who need the resources available in the center of computer graphics. To support and maintain the equipment in the center of computer graphics.

Teaching assistant at Course "Algorithms and Data Structures"
octubre de 2008 - junio de 2009 (9 meses)

Los Chaguaramos, Caracas Venezuela.

Support students with the teaching practicing área of the course

Controlsoft
Remote Programmer and designer Web
mayo de 2008 - octubre de 2009 (1 año 6 meses)

Development of administrative system (GesOp) Version 2.0. This system is for the company's internal use. It was programmed using PHP.

ControlProsystem
Assistant manager Database remote
2007 - 2009 (2 años)
Venezuela

Maintenance of databases and handling of backups

Industrial Movement
Junior Developer
2007 - 2007 (menos de un año)
Bello Monte, Caracas Venezuela.

Develop specific events and topics for the web pages that the company was doing at the time .

Controlsoft
Freelance Leading project, designer and programmer
2005 - 2006 (1 año)

Development of administrative system (GesOp) Version 1.0. over PHP
